

Stainless steel panels

HWAM 3310, HWAM 3320, HWAM 4410

Design: Strand + Hvass

The HWAM 3310, HWAM 3320, and HWAM 4410 wood-burning stoves are all designed so that the side panels can be replaced if the unit is in need of a new look. This makes it possible for you to add a more personal touch to your stove. We have now developed a side panel in a new material that completely match the expression of Scandinavian design.

The option is stainless steel. A stylish material that causes the wood-burning stove to “hover”. Stainless steel continues to gain more popularity in contemporary interior design, and it provides an exciting contrast to the fire’s warmth.

The panels can be replaced by the original black or grey steel sides at any time, and without tools.

HWAM Ash Clean SystemTM

HWAM Ash Clean SystemTM

When it is time to clean your wood-burning stove, ash must be effectively removed. The HWAM 3310, HWAM 3320, and HWAM 4410 wood-burning stoves offer the solution, as each model is equipped with the patented HWAM Ash Clean SystemTM. The system is discretely concealed behind the door, and it ensures easier cleaning due to its completely closed system.

The HWAM Ash Clean SystemTM causes ash to fall into the closed ash pan, after which it can be easily vacuumed out with a HWAM Ash Vac.
