## CUBIS

USER'S MANUAL

## CONGRATULATIONS ON YOUR NEW HWAM OUTDOOR PRODUCT

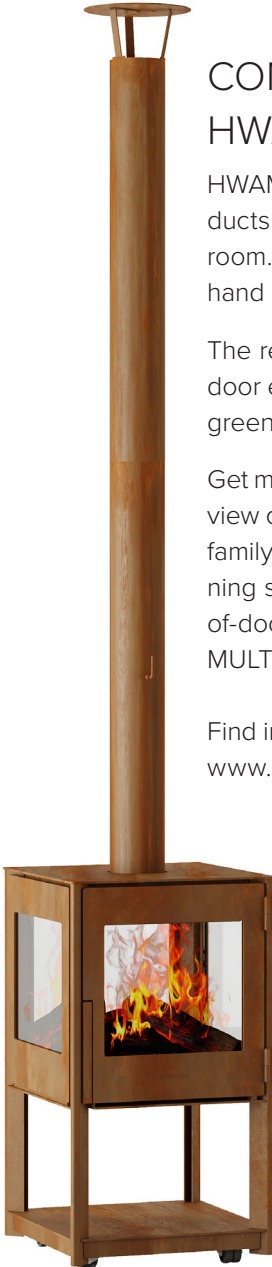

HWAM Outdoor consists, among other things, of a series of products in Corten steel — designed to create a beautiful out-of-doors room. Functionality, timeless design and good Danish quality go hand in hand.

The reddish-brown Corten steel provides a modern and cosy outdoor environment, the rusty red shades complementing the natural green colours and the cold stone colours perfectly.

Get more out of outdoor living. Enjoy the warmth and the fascinating view of the flames. Providing the setting for cosy get-togethers with family and friends, the outdoor fire pit FUEGO and the wood-burning stove CUBIS lend a wonderful warm atmosphere to your out-of-doors room. Organise or divide your out-of-doors room with the MULTI-FLEX series, which can be combined in a myriad of ways.

Find inspiration and see the complete range at [www.hwam.com/hwam-outdoor](http://www.hwam.com/hwam-outdoor).

Have fun with your new  
HWAM Outdoor product.

## CUBIS — OUTDOOR WOOD-BURNING STOVE

CUBIS is a functional and decorative fireplace for your terrace or garden. Enjoy the dancing flames and the heat from all four corners.

CUBIS comes with a 2m two-piece chimney pipe and a chimney cowl. A damper in the lower pipe can be used to regulate chimney draft.

On the inside, CUBIS is clad with insulating stone (we recommend removing the cladding if the wood-burning stove will not be used for a long period of time to avoid too much moisture and frost damage)

NB! The handle may get hot. Always use a glove!

Be careful, all exterior surfaces will get hot.

### ACCESSORIES – BASE WITH WHEELS

Make CUBIS mobile by placing it on a base with wheels.

The stove can now be moved about the terrace.

## PLACEMENT

Place your CUBIS stove on a level and stable surface. Take the same precautions as with any open fire. Keep a good distance and do not place the CUBIS stove on or close to combustible material. Always observe the rules and requirements for open fire safety laid down by the local and national authorities

## MAINTENANCE

Clean the glass before each ignition to get the best experience of the flames.

When the stove is cold and there are no more embers left, use a shovel to empty out the ash. Please remember that there may still be embers long after the fire has died.

## GOOD LIGHTING TIPS

- Use finely divided kindling and patent fuel to start the fire.
- Always use dry firewood. Wet firewood produces smoke.
- Do not use too large pieces of firewood. Large pieces of firewood will cool the fire and produce more smoke.
- Fire sensibly and carefully.
- Do not leave the fire out of sight while there are still flames.
- Always keep some water nearby as a safety precaution.

# ASSEMBLY INSTRUCTIONS

## CORTEN STEEL

Corten steel is characterised by a rusty surface. A special alloy of copper, nickel and chromium has been added to the steel. This means that the surface quickly forms a layer of rust. At the same time, the corrosion time of the steel underneath the surface is strengthened and prolonged by up to 8 times.

The rusty red colour will build and change over time depending on the weather. In dry weather, it will be dark and dull; in rainy weather, shiny brownish.

## TIPS TO QUICKLY BRING OUT THE RUSTY RED COLOUR

Your new HWAM Outdoor product has not yet developed its rusty patina when you buy it. It will take approx. 14 days of rain for the surface to rust. Depending on the weather, the patination process may take longer.

If you are a little impatient and would like to speed up the rusting process, you can do the following:

- Wash all surfaces in plain soapy water to remove any oil residues from when the product was produced.
- Let the surfaces dry.
- Then you can spray the surfaces with salt water (1/20) or vinegar, or apply it with a cloth.

The acid in the vinegar accelerates the rusting process of the washed-down sides and shortens the process to approx. 3-4 days.

We do not recommend using strong detergents, as this may shorten the life-time of the product.

## MAINTENANCE

Please note that rust may rub off on and discolour the ground; it may also rub off when you touch it. Rust can be removed from concrete tiles with oxalic acid (100 g of oxalic acid to 1 litre of water). Rub at the stain and rinse with clean water. Rust stains on surfaces are also bleached by the sun.

## WHO IS HWAM A/S

HWAM A/S is one of Denmark's largest manufacturers of modern high-quality wood-burning stoves. HWAM A/S has been an innovative player in the wood-burning stove industry since the 1970s and a pioneer within the technological development of wood-burning stoves.

HWAM products are manufactured at a high-tech production facility in Denmark. In 2021, HWAM A/S will expand its range with a HWAM Outdoor series. Production will be in the experienced Danish hands of our wood-burning stove production.
